

Energy Policy

1. Commitment to Continuous Improvement

We are committed to continuously improving our energy performance and our energy management system, with the particular objective of systematically reducing energy consumption in relation to production output.

2. Compliance with Legal and Regulatory Requirements

We undertake to comply with all applicable legal requirements and other relevant obligations relating to energy efficiency, energy use and energy consumption, and, where possible, to exceed them.

3. Provision of Resources

We ensure the availability of information and resources required to achieve our energy objectives and targets and communicate our energy consumption and energy efficiency transparently to all relevant interested parties, including customers, suppliers and the public, where appropriate.

4. Establishment and Review of Objectives

We set measurable energy objectives and review them regularly to ensure their continued relevance and effectiveness, thereby ensuring continuous improvement in energy performance.

5. Reduction of Specific Energy Consumption

We aim to achieve an annual reduction in specific energy consumption in relation to production output.

6. Promotion of Energy Awareness

We promote a corporate culture that emphasises energy awareness and the personal responsibility of every employee for saving energy. To this end, we provide regular training on energy-efficient behaviour and actively promote awareness of energy efficiency across all departments.

7. Energy-Efficient Procurement

We support the procurement of energy-efficient and environmentally friendly technologies and services that have an impact on energy performance.

8. Conduct of Energy Audits

We carry out regular energy audits to identify and implement energy-saving potential.

9. Promotion of Renewable Energy

We promote the use of renewable energy wherever this is technically feasible and economically viable.

10. Optimisation of Production Processes

We optimise our production processes in order to minimise energy consumption without compromising product quality.

11. Use of Advanced Energy Management Systems

We use advanced energy management systems incorporating data analysis and monitoring tools to accurately monitor and control our energy consumption and to make informed decisions regarding energy use and energy efficiency.

12. Promotion of Sustainability and Reduction of Greenhouse Gas Emissions

We consistently pursue sustainable measures to reduce our greenhouse gas emissions and commit to achieving CO₂ neutrality for all direct and indirect greenhouse gas emissions by no later than 2050.
